

Data Collection Options

Labor is your greatest single cost of doing business. In order to maintain control, accountability and business intelligence for your payroll, you need to accurately collect "up-to-the-minute" time and labor data from your workforce. However, each employee population has unique requirements and your data collection solution must be appropriate and efficient within each group's workflow.

Whether your employees are spread across the site, or across the country, with blue collars or white, Galaxy Technologies, Inc. offers the optimal combination of time and data collection options. The Galaxy Data Collection Engineers support our offerings, develop options and integrate the latest technologies allowing Galaxy to offer the most comprehensive variety of options available. Our Labor Management Consultants will guide you to the appropriate solution for each population within your workforce. Galaxy Badge Services provides personalized badge media, photo identifications and terminal accessories.

Galaxy Data Collection Options

Biometrics

With biometric data collection terminals your "card" is always at "hand" and cannot be lost or duplicated! The biometric devices are an effective solution to "buddy-punching" time theft and high-security requirements. Biometric terminals eliminate costly employee badge administration and headaches. Galaxy offers models supporting both hand-geometry and fingerprint biometrics.

Badge-Based Terminals

Familiar to use, ultra-rugged and available with a wide range of powerful feature/functionality, badge-based terminals from Galaxy continue to be an industry standard. Galaxy Badge Services can provide your organization with the correct badge for your organization including bar code, magnetic stripe, security stripe, photo ID badge, multiple format, corporate logo and other options.

Proximity Cards / Access Control

Galaxy's proximity card devices can be deployed to leverage your existing access control badges/fobs. Employers need to administer and employees only need to use one badge or fob for both systems.

Web Punching

An unparalleled solution for professional staff and remote workforces, Internet-browser based time collection is available as a standalone "Web Timeclock" and also within TimeStar™'s Employee and Manager Self-Services functionality.

Kiosk / Touch Screen

Intuitive, highly graphical kiosk-PC data collection is a cost-effective and user-friendly solution for a variety of environments.

Mobile Devices / Telephony

For mobile workers and distributed teams, Wi-Fi enabled hand held devices and call-in telephony put advanced data collection functionality directly in your employee hands.

Point of Sale (P.O.S.) / Register

A variety of software solutions are available for streamlined timekeeping within your existing P.O.S. application. Custom engineering services are also available to support legacy and in-house P.O.S. systems.

Communications Options

Each Galaxy data collection implementation will be designed with the most effective communications solution for your network. Options include: Ethernet (TCP/IP), RS232, Modem, XML-Web Services, Real-time and batch mode communications.
